GenMute™ Transfection Buffer (5x)

Size: 8.0 mL

This product is for laboratory research ONLY and not for diagnostic use

Introduction:

GenMute[™] Transfection Buffer (5x) was formulated for GenMute[™] siRNA Transfection Reagent for optimal transfection efficiency and maximum gene expression knockdown. GenMute[™] Transfection Buffer is used to dilute siRNA/DNA to form most efficient transfection complex.

$\label{eq:preparation} Preparation of Working Solution of GenMute^{{\tt m}} Transfection Buffer:$

GenMute^M Transfection Buffer(5x), 8.0 ml, is provided as 5x concentrated stock solution to make 40 mL of working solution (1x).

To prepare working solution of GenMute[™] Transfection Buffer, dilute one part of the stock solution (4x) with 4 parts of ddH_2O into a sterile bottle. The working solution (1x) is stable at RT for 12 months.

Note: To avoid salt precipitation, we recommend both the GenMute[™] Transfection Buffer stock solution (5x) and GenMute[™] Transfection Buffer working solution (1x) shall be kept at RT all the time.
